DETAILED ACTION

Allowable Subject Matter

Claims 26 and 27 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or teach making an inner or an outer yoke in an annular shape by arranging a plurality of multi-layer blocks with a spacing between adjacent blocks filled with a compression formed body with a vibrator supporting a permanent magnet located between an inner and an outer yoke as recited in claims 26 and 27. Halliday 5,734,209 A teaches placing low reluctance spacers between annular magnets in figure 24 as described in column 13 line 59 to column 14 line 6. Lashmore et al. 6,251,514 B1 teaches making low reluctance spacers from either compressed powder or silicon-iron laminations. Combining Halliday with Lashmore et al. would result in a yoke having a cylindrical shape but instead of blocks there would be rings combined together. Applicant's claims 26 and 27 are supported by Applicant's figures 1b, 2a and 2b, which show blocks combined together. Tajima et al. 6,452,302 B1 discloses a rotary motor where a plurality of blocks are combined together to make an annular yoke but does not disclose any blocks made of compressed material. Hoffmeyer teaches separating portions of an annular yoke by placing a non-magnetic filler material between said portions. None of the cited references, either singly or in combination, teaches the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
